DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "368" has been used twice in fig. 3 of the application. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2618

3. Claims 19,21,22,24 are rejected under 35 U.S.C. 102(b) as being anticipated by Everett et al. (US 5,317,330).

Regarding claim 19, Everett teaches determining a mode of operation for a communication system; transforming an antenna element into a high-impedance parallel resonant circuit in a receive mode; and transforming the antenna element into a low-impedance series resonant circuit in a transmit mode (see figs. 3 and 4; col. 1, line 5 to col. 3, line 65).

Regarding claim 21, Everett teaches transforming the antenna element into a high-impedance parallel resonant circuit in the receive mode connecting the inductive coil in parallel across the tuning capacitor and in parallel across an equivalent capacitance for both the DC blocking capacitor and an integrated circuit (IC) capacitance (see figs. 3 and 4; col. 1, line 5 to col. 3, line 65).

Regarding claim 22, Everett teaches transforming the antenna element into a low-impedance series resonant circuit in the transmit mode includes connecting the inductive coil in series with the tuning capacitor and the DC blocking capacitor (see figs. 3 and 4; col. 1, line 5 to col. 3, line 65).

Regarding claim 24, Everett inherently teaches the mode of operation for the communication system defaults to the receive mode.

Allowable Subject Matter

4. Claims 1-18 are allowed.
5. Claims 20,23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
